The Dodge Tool overlays the existing image with a slightly desaturated version of the one you are using. By using the Dodge tool, you can soften or lighten the colors in a specific area. When using the Dodge Tool, make sure you toggle the Screen blend mode on. With a Screen blend mode off, you can use many other overlay blending options to get the results you're looking for.

The Burn Tool can be custom-tuned to give your images a matt or shiny finish. Use the Burn Tool to create an awesome shiny effect. It uses the Screen blend mode and the Highlights and Shadows channels as blending options, so make sure to toggle the Screen blend mode on. The Shadows channel ensures that you retain all of the areas that are lighter than the surrounding area, while the Highlights channel does the opposite.

The Paint Bucket tool lets you select a solid color or shape for a particular area of your document. Once selected, you can use the Sharpen tool to give the selected area a crisp appearance. The same tool (Paint Bucket) can be used for line art. It's great for when you need to straighten out a jagged line that's created by too much detail.

When using the Brush tool, make sure to have a comfortable grip on your stylus. You can then tap the surface of your

image to apply color to a certain area. By tapping the stylus on different areas, you can create brush strokes like those you see in traditional art.

**What It Does:** The Smudge tool is a brush tool that is used to apply colors to a selected area. It works just like a paintbrush by having you tap a designated area to apply a color to. Thus, it provides control over the brushed color. For instance, you can use the Smudge tool to make a gradient on a solid color, so it's recommended to use the Smudge tool in conjunction with the Gradient tool. It's an easy way to soften or enhance specific tones of a color within a selected area. It can also be used in conjunction with the Brushes tool to add brushes to the image.
