You are here Student Spotlight Natalie DeCola '17, Appellate Theory, Mock Trial and

Ethics Hello everybody, my name is Natalie DeCola, and I am a first-year student here at Queen's. I'm a pre-law student, currently interning at the Canadian Human Rights Tribunal of Ontario. I'm also involved in First Nations advocacy, and I'm a member of the National Aboriginal Youth Leadership Circle (NAYLC) and the Queen's chapter of Indigenous Peoples. Another one of my passions is community service work, and I do a lot of that through NAYLC. My involvement started in early high school, but this year I'm heading up a team called The Queen's Warship Youth Ambassadors, which is a group of students from across the university who plan to foster relationships between local Indigenous and Francophone communities in the Eastern Townships region of Quebec. My ultimate goal is to work in the Indigenous justice sector and the Aboriginal legal advocacy field. I think it will be a good fit, because I am passionate about the community I grew up in, and the work I do now is right in line with my interests and passions. Optical fiber connectors are used in the telecommunications industry to connect optical

fiber cables to active devices such as cable modems, transceivers, repeaters, and optical network units. Optical fiber connectors have a connector body, a ferrule attached to the connector body for mounting an end

What's New in the?

TS-AudioToMIDI is an application that you can use to convert an audio signal into a MIDI sequence. With it you are able to transform MP1, MP2, MP3, MPP, MPA, AIF, SND, AU and WAVE files to MIDI. This way you can compress any of the previously mentioned audio formats into a track that can be easily uploaded to a website or attached to an interactive piece of software without having to worry about it taking up too much disk space. Moreover, once a track is converted into MIDI format, its structure and notes can be modified in a simple manner. Instruments, voices and even the melody can be altered to fit your needs or taste. Doing so makes TS-AudioToMIDI a handy tool to

have for when you need to create or customize a song and load it on your phone as a ringtone. The application displays a comprehensive interface and offers you quick access to playback controls, a Wave recorder, spectrum analyzer and keyboard, a graphic equalizer, adjustments for the noise gate threshold, the instrument selector and much more. TS-AudioToMIDI features monophonic and polyphonic recognition modes and uses four algorithms. The application also provides the use of both real-time and pre-recorded modes for sound recognition. With this program you benefit from manual and auto tuning for the audio signal, frequency deviation, CD track input and real-time spectrum analysis of the loaded song. It also comes with a note duration filter that can be used to ignore short notes. To help you out with track editing, TS-AudioToMIDI supplies a large library of piano, bells, organ, guitar, trumpet and many more instruments which you can add with a simple click. As far as the note detection algorithms go, you can choose between Poly Sensors, Mono Correlator, Mono Breaking, Mono Sensors and Beat Detection.

In the development of TS-AudioToMIDI, JDA Software received the honorary of T.E.A.M.S.(Technology, Education, Applications, Media and Services) for its high quality applications. {
