StroyCode [32|64bit]

StroyCode is an approachable tool designed to help young developers create applications easier by putting at their disposable different sets of ready components, such as a Pascal source code generator, objects with constructors and destructors, as well as methods with identifiers, handlers and conditions. Fast install and clear-cut UI The setup procedure is quick and uneventful. As for the interface, StroyCode opts for a regular window with a clean and pleasant aspect, where a palette lets users easily insert components at the cursor's current position. Insert components and create program modules For example, inserting a field enables users to change its name and select its type. It is possible to cut, copy, paste and delete components, as well as to create program modules (Win32, console or web app, library, unit), resource, command and structured data files, along with rich text and plain text files. Projects can be saved to file for further modifications. In addition, users may work with a search and replace function, view the source code, enable non-printing characters, and so on. As far as program settings are concerned, it is possible to change the UI language and font size, display log details, as well as disable sounds, among others. Performance and conclusion The tool has a good response time and does not put a strain on PC performance, as it runs on low CPU and RAM. We have not come across any issues throughout our evaluation. All in all, StroyCode comes in handy for anyone who wants to create programs with the help of some preset components. Description: After writing a full C# application in Visual Studio, it's time to package your application into an installer and send it out to the world. Assembling an installer is easier said than done. If you've never built an installer before, you'll soon discover that building an installer is a lot more than picking a program and hitting a button. When you first start building your application, Visual Studio will ask you to make a number of decisions, including where to put files, what registry keys to add to the registry, how to handle your application folder, what happens when the user cancels the setup, what happens when the user asks to run the application, what happens when the user cancels the run of the application, what happens when the user asks the user for the password for the account
